The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stromal cell-derived factor lalpha (SDF1a). The method is used for stimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury. Inhibition of this process is useful in treatment and prevention of a very wide range of diseases, such as, infection (by bacteria, fungi, protozoa or viruses such as human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS)), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bullmia, cathma, parkinson's disease, acute heart failure, hypotension, dypertension, urinary retention, cateoporosis, anginal pectoris, wocardial infarction, stroke, ulcers, benign prostatic hypertrophy, migraphrenia) and dyskinesias (e.g. Huntingdon's disease), inflammatory conjecase, atherosclerosis, restenosis, restenosis, restenosis, restenosis, restenosis, restenosis, restenosis, retinopathy, inflammatory bowel disease, atherosclerosis, restenosis, Alzheimer's disease, congestive charact failure, cardiac remodeling, angiogenic disease, congestive and Kaposi Sarcoma. This sequence encodes the human CXC chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                546

The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions. ANYTHER of and ABP65061-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a patient, for manufacture of a medicament for treating a disease in a patient. For manufacture of a medicament for treating a disease in a patient and for regulating tumourigenesis, angiogenesis, apoptosis, biological response to hypoxia conditions, or hypoxia-associated pathology in a patient. The coding sequences and proteins are also useful for monitoring the therapeutic treatment of a disease or physiological condition, such as cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, precelagmmia, atherosclerosis, inflammatory conditions, wound healing, inflammation, erythropolesis or hair loss 103 163 126 223 186 283 284 AGICGGCAATGGAITGGIGAICCTGGICATGGGITACCAGAAGAAGCTAAGGAGCAIGAC 343 71 Identifying a gene involved in disease for treating hypoxia-regulated conditions, comprises comparing the transcriptome/proteome of two cell types under different conditions and identifying a differentially antiinflammatory; vulnerary; gynecological; ophthalmological; vaccine; hypoxia; tumourigenesis; angiogenesis; apoptosis; cancer; ischeemic condition; reperfusion injury; retinopathy; neonatal stress; preeclapmaia; atherosclerosis; inflammatory condition; wound healing; inflammation; erythropoiesis; hair loss; human; gene; ds. 104 TAGAGCGAGTGTTGCCATGGAACCGATCAGTGTGAGTATATACACTTCTGATAACTACTC 187 IGCIAATITCAATAAATCITCCIGCCCACCATCTACTCCATCATCTTAACTGGGAT 44 geaggrachaghageagracheacerreraageestragracheegracheegra 12 degecaceadradeaaadraaceceaagecereagracieearageaarecaerere 72 gagaaccagoggraaccardga-----ggggarcagrararacacricagaraactacac 164 TGAAGAAGTGGGGTCTGGAGACTATGACTCCAACAAGGAACCCTGCTTCCGGGATGAAAA 224 CGICCAITICAATAGGAICTICCIGCCCACCAICTACTICATCATCTICTIGACTGGCAT Gaps 46; Query Match

The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polynucleotide sequences given in the specification. These angiogenesis-associated polynucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue undergoing angiogenesis. The method and the polynucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polynucleotide sequences compared in the gene therapy of such disorders. The majogenesis-associated proteins encoded by the polynucleotide sequences are also useful in the gene therapy of such disorders. The majogenesis-associated proteins encoded by the polynucleotide sequences are useful as a vaccine for therapeutic and prophylactic immunisation. ABX08739-ABX0853 represent angiogenesis-associated polynucleotide

                                                                                                                 \dot{\delta}
                                                                                                                                                                                                                                                             8
                                                                 The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to nucleic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell renal carcinoma (CC-RCC) and that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosis of patients with CC-RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by affremential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene expression profiling of tumour and normal tissues. The present sequence represents a human cDNA sequence up-regulated in CC-RCC patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAAGGGAGTCTATGTGGGCGTCTGGATCCCAGCCTCCTCGTGACTATACCTGACTTCAT 643

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        71
                                                                                                                                                                                                                                                                                        ಹ
                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes human chemokine receptor CXCR4. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The proviso is that the cell chemokine-receptor is not CX3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchitis,
                                                                                                                                                                                                                                                        Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or asthma, by modulating a binding interaction between a cell chemokine-receptor and surface protein of the virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CIGGGCAGITGAIGCCAIGGCIGACIGGIACITIGGGAAAITITIGIGIAAAGGCIGICCA

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or diseases. autoimmune

Disclosure; Fig 1; 523pp; English.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR. and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for carefuled and antibodies are useful for diagnosing and designing drugs for treating immune-related disease, immunological-related cell proliferative comparation-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, agrowth-related disease, contextributis, osteopromis, and one or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, conscentivities, osteopromise, cancer, cardiomyopathy, chronic and cutte inflammation, allergies, coher cardiomyopathy, chronic and cutte circlammation's disease, multiple sclerosis, pain, psoriasis, conscentivities, trauma, ulcers, or anxiety, depression, schizophrenia, dementia, mental retardation, memory comparty, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorders in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis, obesity, mauses, hypertension, the present invention

The invention relates to methods and compositions for inhibiting small cell lung cancer (SCLC) proliferation and metastasis through modulation of the activity or expression of CXC chemokine receptor 4 (CXCR4), and optionally, that of the tyrosine kinase receptor c-Kit. Administration of a CXCR4 inhibitor modulates cellular adhesion and inhibits cellular proliferation, motility, and morphological changes in an SCLC cell coll population. The invention also disoloses methods on the finding that CXCR4 is ubiquitously expressed, and c-Kit is variably expressed, in SCLC cells. The invention also disoloses methods of screening for CXCR4 inhibitors; can enable to CXCR4 inhibitor therapy; determining whether a sample of lung cancer cells expresses CXCR4 and is therefore amenable to CXCR4 inhibitor and a c-Kit inhibitor; and a method of assessing whether CXCR4 inhibitor and a c-Kit inhibitor; and a method of assessing whether CXCR4 inhibitor and a c-Kit inhibitor; candination therapy should be continued, by determining CXCR4 (and optionally c-Kit) activity in two or more tumour samples taken from an SCLC patient during the course of treatment. The methods of the invention are useful for treating SCLC, for screening for agents for the treatment of SCLC, for determining whether a SCLC from individual patients is suitable for treatment with agents of the invention and substances continued and should be continued. The presents coping the invention and solution, and be used in methods of the invention.
                                                        Use of a CXC chemokine receptor 4 (CXCR4) inhibitor, for modulating cellular adhesion or inhibiting proliferation, movement, or morphological change in a small cell lung cancer (SCLC) cell population, or for treating a subject having SCLC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   223

```
The invention relates to a gene expression profile comprising one or more genes (AB234889-AB23692) and generated from a cell type. The cell type is a coronary artery endothelium, umbilical artery or vein endothelium, cortic endothelium, dermal microvascular endothelium, pulmonary artery or pothelium, ronchial epithelium, mammary epithelium, prostate epithelium, renal cortical epithelium, renal proximal tubule epithelium, myometrium microvascular endothelium, prostate epithelium, renal epithelium, renal proximal tubule epithelium, small airway epithelium, renal epithelium, umbilical artery smooth muscle, carrell progenitor cells, skeletal muscle, astrocytes, actic smooth muscle, meaangial cells, coronary artery smooth muscle, dermal fibroblast, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery artery smooth muscle, coronary artery smooth muscle, coronary artery artery smooth muscle, coronary artery smooth muscle, coronary artery artery artery artery artery artery artery artery artery artery artery artery artery 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCAGGTGCAGGTAGCAGTGACCCTCTGAGGCGTTTGGTGCTCCGGTAACCACCACGGCTG 103
